

INEXPENSIVE CABLE PALLET STOP

ABSTRACT OF THE DISCLOSURE

5 A material shelving comprises a basic shelving unit
with vertical frame supports inter-tied with lateral load
beams. At the rear of each shelf, between each pair of
vertical frame supports, a backing cable is strung
between two offset brackets just above the lateral load
10 beams. Any pallets and material on pallets placed on the
load beams of the shelving will be stopped from being
pushed through by the backing cable.
